

#### About ProH:

By utilizing the same technologies used by modern poultry companies to clean meat prior to packaging for the grocery store ProH is designed to safely kill dangerous or disease causing bacteria, viruses, spores and fungi found on and around livestock. ProH is designed to help prevent diseases and illness by protecting against E Coli, Salmonella, Avian Influenza A (Bird Flu), HIV, Staph, Strep, Campylobacter, Rhinovirus, Listeria, Thrush and many other viral, fungal or bacterial based pathogens and germs.

#### Pro H is great to use in:

**Horse & Livestock stalls** or trailers after a sick animal has been removed or prior to housing or transporting a healthy one. \***Petting Zoos** where children are touching animals or surfaces that could be contaminated \***Veterinary Clinics or Kennels** before introducing new animals to a potentially contaminated environment.

#### Dangers of Certain Viruses and Bacteria:

Raising, Transporting, Handling and Showing Livestock on the farm or around public venues such as fairs, expos, auctions and zoos can create a threat to both people and the animals themselves. Potential life threatening diseases can be passed between animals and humans from direct or indirect contact and even from contaminated airborne particles.

Once mixed ProH is not harmful in case of skin contact, accidental ingestion or eye splash. No special storage requirements or precautions for disposal.

**Caution:** Keep concentrate Out of Reach of Children & Pets. Once mixed ProH is not harmful in case of skin contact, accidental ingestion or eye splash. In the case of an accidental eye splash some stinging may result which should be corrected by rinsing gently with water. Seek doctor's advice if symptoms persist. Shelf life 18-24 months. No special storage requirements or precautions for disposal.

**Ingredients:** Water, Citric Acid, Phosphoric Acid, Hydrochloric Acid.

Safe to Use on or Around People, Animals & Food

# ProH

Antimicrobial Concentrate

Safely Kill Germs on Hands or Around Food & Eating Areas

A Must for all farms, fairs, livestock expos & petting zoos

## SAFELY KILL VIRUSES, DANGEROUS BACTERIA & FUNGI

#### USE FOR:

Livestock Facilities • Horse Stalls  
Veterinary Clinics • Dog Kennels  
Cool Rooms • Animal Trailers  
Fair Facilities • Pet Cages • Zoos  
Livestock Auctions • Pet Stores

Animal Wash • Poultry Houses • Foaling Stalls

#### ANY LIVESTOCK:

Horses • Dairy • Cattle • Goats  
Sheep • Swine • Poultry • Show Animals

#### ANY PETS:

Dogs • Cats • Birds • Ferrets • Rabbits  
Hamsters • etc.  
All Animals Large & Small

ALL NATURAL • NON TOXIC  
ENVIRONMENTALLY FRIENDLY  
BIODEGRADABLE • WATER SOLUBLE  
HYPO-ALLERGENIC  
GRAS (Generally Regarded As Safe)

Will not kill grass or vegetation

32 fl. oz. (1 quart) 946 mL  
Makes 6 gallons

This technology meets OSHA, USDA clearance for use directly on meat, fruits & vegetables, FDA & EPA toxicity tests

#### Directions for Dilution & Use:

Pour 16 ounces (2 cups) of ProH into a 3 gallon pump up sprayer and fill with clean tap water. Dilute 10:1 or up to 24:1. Mix thoroughly then spray, dip mop or wipe.

**Horse & Livestock Stalls** - Completely wet with ProH surfaces and crevasses of unbedded stall including the walls, mats and floor, allow to air dry. Repeat periodically as necessary. Perfect for foaling stalls. A must for stalls at home & shows, shared transport trailer, on riding equipment, boots, bits, feed buckets & muck forks. You can even wash your hands or clean your horses hide and hooves to protect against harmful pathogens and fungi.

**Fairs & Zoos** - Wet areas of concern with ProH and allow to air dry. Concentrate where contamination with animal feces, urine or saliva exist. This can include metal, wood or plastic railings, concrete, rubber or wood walkways. Saturate bedding or even use as a dust inhibitor in arenas and petting areas to minimize airborne distribution of pathogens. Spray animal walkways, food areas, tables, chairs or seating where direct or airborne contamination may be a concern.

**Healthy Animals** - Like horse stalls, clean first then spray stall, trailer, etc. with ProH to create and maintain a clean area for your animal. Even use as a foot dip or on wounds, rashes or hot spots.

**Sick Animals** - Quarantine sick animals to minimize the chance for the spread of infectious disease or pathogens. If an area has been contaminated soak and rinse the area with ProH 10:1 mixture, wash with soap and water, then wet again with ProH and allow to air dry.

## Use for Bio-Security Areas & Large Scale Clean-Ups
