

Date: March 23, 2016
To: Carrie Lamb, Kellie Herman & Sarah Davis
City of Springfield Environmental Services

Thank you for the time yesterday when we met in your offices to discuss the details of FlexTran's prefilled **Silt Sock** for job site erosion & sediment control. As discussed, Silt Sock is a performance tested product that meets and exceeds the specific requirements of MODOT, ODOT & KSDOT. Each Sock is made to perform on the job site with strength and adequate flow through rates designed for a high-level reduction of erosion and sediment reduction. We make our products using clean compostable wood materials that are specifically sized, accepted as environmentally friendly, weed, disease and pathogen free. Our fabric used meets and exceed the detailed specifications outlined by the DOTs listed above for this product category.

In our meeting we were able to discuss several key issues including the measurable expectation placed on us in order to meet the requirements of MODOT. At a state and regional level, it is important that contractors can count on the consistency, quality and performance of our products. At a local level, in and around the City of Springfield, it is just as important that Silt Socks perform as tested and meet or exceed the City's requirements at the job site.

Again, I want to thank you for your time. I felt our meeting was very productive. I respect the work your department does in maintaining the requirements set forth by the EPA as a MS4 region and by the Clean Water Act. If I can be of any assistance to your department please don't hesitate to contact me directly.

Thank you also for your willingness to field any calls from our dealers or contractors concerning Silt Sock's acceptability of use inside the City of Springfield and the City's acceptance of the MODOT requirements we follow in manufacturing of Silt Sock. Clarity on this issue will be very beneficial. Per your request I will welcome them to call Kellie Herman at (417)730-0636 or Carrie Lamb and Sarah Davis at (417)864-1944.

Regards,
Barry Ward
